Patient Name: Amit

Age: 21 years

Patient ID: PAT-99120

 85.8 kg Weight In Body	 -- Visceral Fat Level In Body	 25.6 BMI In Body	 76 Heart Rate ECG	 62.0 J Bio-Energy Bio Well	 100 % Energy Reserve Bio Well	 3.5 LF/HF HRV	 81 bpm Nadi Pulse Nadi
---	---	-----------------------------------	------------------------------------	---	--	--------------------------------	---

Physical Health

The patient's physical health is generally within normal parameters, with a BMI of 25.6 indicating overweight status. Their heart rate of 76 bpm falls within the normal range, and their ECG rhythm is reported as normal. However, their LF/HF ratio of 3.5 suggests an imbalance in autonomic nervous system function, which may warrant further evaluation.

Psychological

The patient's psychological health profile indicates a state of moderate anxiety and heightened sympathetic activity, as evidenced by a LF/HF ratio of 3.5, exceeding the threshold for high sympathetic dominance. The Nadi Stress and Overthinking indices also suggest a medium level of stress and hyperactive nervous system activity, respectively, contributing to feelings of mental anxiety. Overall, the patient's nervous system energy is elevated at 84.54, indicating an increased state of arousal.

Emotional

The patient's current emotional state is characterized by high emotional resilience, as indicated by an Energy Reserve of 100%. However, a lower Bio-Energy level of 62.0 Joules suggests that overall vital energy for emotional regulation may be slightly compromised. Furthermore, the Nervous System energy reading of 84.54 indicates moderate emotional processing capacity, suggesting some reserve but also potential vulnerability to stress or emotional overload.

Spiritual

The patient's Spiritual health assessment reveals a predominantly balanced energy profile, with notable alignment at the Heart Chakra, indicating optimal expression of love and compassion. The Solar Plexus Chakra also demonstrates good alignment, suggesting stable emotional regulation. However, moderate misalignment is observed at the Sacral Chakra, which may be related to emotional or creative blockages. Overall, the patient's bio-energy reading of 62.0 Joules indicates a relatively high spiritual vitality and life force.

Nervous system

35% Needs intervention

The patient's nervous system is showing signs of increased activity, with an energy level of 84.54, indicating a need for attention to prevent overstimulation or burnout. A closer examination is warranted to assess the underlying causes and provide targeted support.

Cardiovascular system

83% Normal

Cardiovascular System shows normal function with score 83%.

Respiratory system

82% Normal

Respiratory System shows normal function with score 82%.

Muscle and bone

82% Normal

Musculoskeletal System shows normal function with score 82%.

Digestive system

35% Needs intervention

The patient's digestive system is showing signs of decreased energy levels, with the liver and pancreas scoring below normal ranges at 67.96% and 59.19%, respectively, indicating a potential need for attention to maintain optimal function.

Integumentary system

83% Normal

Integumentary System shows normal function with score 83%.

Endocrine system

83% Normal

Endocrine System shows normal function with score 83%.

Urogenital system

35% Needs intervention

The patient's urogenital system shows signs of increased activity, with the prostate gland displaying elevated energy levels (89.97) and overall system energy at 88.44, indicating a need for attention to prevent potential complications.

Reproductive system

35% Needs intervention

The patient's reproductive system is showing signs of decreased energy levels, with the prostate and urogenital system scoring below normal thresholds, indicating a need for attention to prevent potential complications.

Immune system

83% Normal

Immune System shows normal function with score 83%.

SWOT Analysis (from DMIT)

Strengths

• Highly Adjusting Nature · Team Oriented · Kind Hearted · Supportive · Interactive · Good Listener · Likes Stability

Weaknesses

• Need Rolemodel · Canbeexploited · Lackofindividualism · Easilyaffectedbyenvironment · Toowiderangeofinterests · Feelsinsecuretowardschallenges

Opportunities

• Need human capital for successful · Conducive for business environment · Best in handling conflict management

Threats

• Caringtoomuchforothers · Maylooseopportunities · Non Risk Taking Attitude · Indecisiveduringcrisis

Wellness Offerings

Patient Name: Amit

Age: 21 years

Patient ID: PAT-99120

Diet

Recommended: Moong Dal, Ghee, Khichdi, Coconut.

Yoga therapy

Surya Namaskar, Anulom Vilom, Padmasana, Bhujangasana, Trikonasana

Physical activity

Walking, Cycling, Strength training, Jogging, Plank, Swimming

Sleep

Amit's sleep patterns may be disrupted due to high levels of stress and anxiety. He should aim for 7-8 hours of sleep per night and establish a consistent bedtime routine to improve the quality of his sleep.

Stress

Amit can try stress-reducing techniques like meditation and deep breathing exercises to manage his stress levels. He can also try journaling or talking to a friend about his feelings to release tension.

Supplements

Amla, Shatavari, Omega-3, Multivitamin

Medicine

Chyawanprash, Giloy
